Matsui T, Aaronson SA, Pierce JH; WPI; 90-290306/38. N-PSDB; Q05989. (USDC) US SEC OF COMMERCE. 07-SEP-1990. 08-FEB-1990; U00617. 09-FEB-1989; US-308282.

Type alpha platelet-derived growth factor receptor gene - useful for transforming cells to express novel protein receptor and also

susceptible to generic engineering.

Claim 7; Fig 3: 64pp; English.

The TR4 clone is the largest contone related to the Til genomic clone, isolated from a library prepd. from human thymus DNA. The TR4 clone is the largest contone was isolated from a M426 human embryo fibroblast to DNA library.

The coding region can be introduced into the pSV2 gpt vector with a simian sarcoma virus LTR as a promoter and expressed in a host. The resulting protein is a novel PDGF creeptor designated type alpha (the known receptor is designated type beta). The polypeptide has a calculated molecular mass of 120 kb and has all the characteristics of a membrane spanning tyrosine type beta). The extracellular region comprises a hydrophobic signal peptide and a ligand binding domain which has structural compology with the PDGF-R/CSF1-R subfamily. Ten Cys residues are family and eight potential N-linked glycosylation sites are also present. A hydrophobic segment spans the membrane and the cytor plasmic region comprises a juxtamembrane region, a tyrosine kinase cegion split into TR1 and TR2 by a hydrophic interkinase region and a hydrophic segment spans the membrane and the cytor plasmic region comprises a juxtamembrane region includes the consensus ATP binding sequence (G-X-G-X-K-G. . R) and a tyrosine consensus ATP binding sequence (G-X-G-X-K-G. . R) and a tyrosine sequence consensus ATP binding sequence (G-X-G-X-K-G. . R) and a tyrosine consensus ATP binding sequence (G-X-G-X-K-G. . R) and a tyrosine consensus ATP binding sequence (G-X-G-X-K-G. . R) and a tyrosine consensus ATP binding sequence (G-X-G-X-K-G. . R) and a tyrosine consensus ATP binding sequence (G-X-G-X-K-G. . R) and a tyrosine consensus ATP binding sequence (G-X-G-X-K-G. . R) and a tyrosine consensus ATP binding sequence (G-X-G-X-K-G. . R) and a tyrosine consensus ATP binding sequence (G-X-G-X-K-G. . R) and a tyrosine consensus ATP binding sequence (G-X-G-X-K-G. . R) and a tyrosine consensus ATP binding sequence to that of pp60 (V-S-C.).

L43067.1 GI:870721

complement C5 inhibitor; inclusion body protein.
Synthetic construct

artificial sequence.

E 1 (bases 1 to 780).
S Evans, M.J. Rollins.S.A., Wolff, D.A., Rother, R.P., Norin., A.J.,
Th, D.M., Mueller, J.P., Nye, S.H., Squinto, S.P. and Wilkins, J.A.
In vitro and in vivo inhibition of complement activity by a single-chain Fv fragment recognizing human C5

NNA (T08480) coding for humanised CDR-grafted scFv CB (R77607) was derived from DNA of hybridoma ATCC HB 11625, the producer of anti-C5 monoclonal antibody (MAb) 5G1.1. The DNA was subcloned into vector pET Trc SO5/NI for expression in Escherichia coll. The 119ht and/or heavy chain CDRs of scFv CB can be combined with CDRs from other 5G1.1-derived antibodies, Fds and light chains (R77607-16) in the produ. of recombinant, including humanised, antibodies that retain the ability of MAb 5G1.1 to block human complement C5a generation and thus to reduce glomerular inflammation and kidney dysfunction
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           708480;

A DNA construct (T08480) codes for a humanised CDR-grafted scrv, designated 5G1.1 scFv DO12 (R77616), which includes CDRs derived from mouse anti-c5 monoclonal antibody 5G1.1. The DNA can be subcloned into vector pET Trc SO5/N1 (see T08489) for expression of humanised scFv in Escherichia coll ME1 cells. Such recombinant antibodies retain the ability of MAD 5G1.1 to block

DNA (T08479) coding for murine scFv 5G1.1M1 (R77606) was obtd. by PCR cloning of DNA from hybridoma ATCC HB 11625, the producer of anti-C5 monoclonal antibody (MAD) 5G1.1. The DNA was subcloned into pET Trc S05/NI for expression in Escherichia coll. The light and/or heavy chain CDRs of scFv 5G1.1M1 can be combined with CDRs from other 5G1.1-derived antibodies, Fds and light chains (R77607-16) in the produ. of recombinant, including humanised, antibodies that retain the ability of MAD 5G1.1 to block human complement C5a generation and thus to reduce glomerular inflammation and kidney dysfunction
